

75%

of the Contractors in the United States

USE SYMONS' COLUMN CLAMPS

THE WORLD'S LARGEST BUILDING

The \$10,000,000 American Furniture Mart, Chicago. This building has 30 acres of floor space. Symons Clamps were used. Also note that on nearly every building in this photo Symons Clamps were used.

General Agents
RICHMOND SCREW ANCHOR COMPANY
243 Bush St., Brooklyn, New York

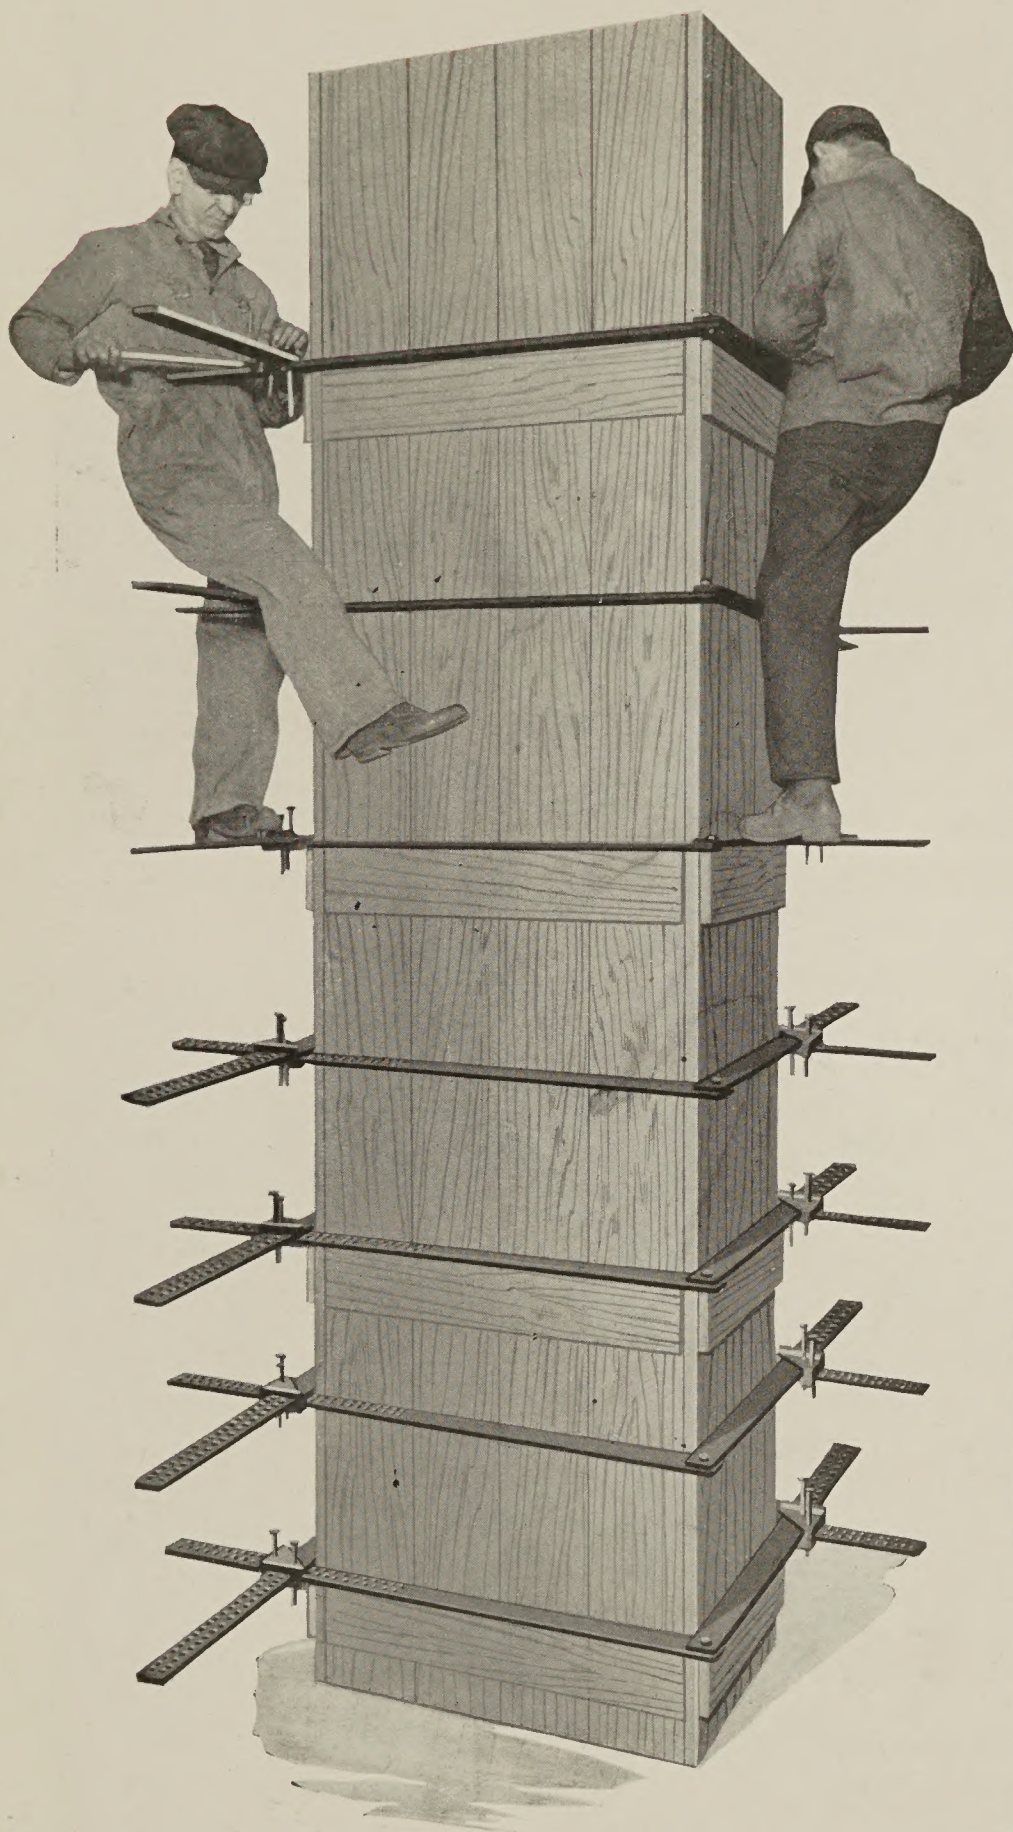

The American Furniture Mart nearing completion. 16 stories high, 1,500,000 square feet of floor space. Over 1,000 Symons Clamps used.

Another view of the world's greatest concrete building job. Three million feet of lumber was used for forms alone.

Symons Clamps are the Choice of the Building World

*Proper spacing for column, 32 inch by 22 inch, net concrete, 11 feet high.
From this illustration you will get an idea of the saving in lumber
and labor in applying Symons Clamps as compared with
other methods*

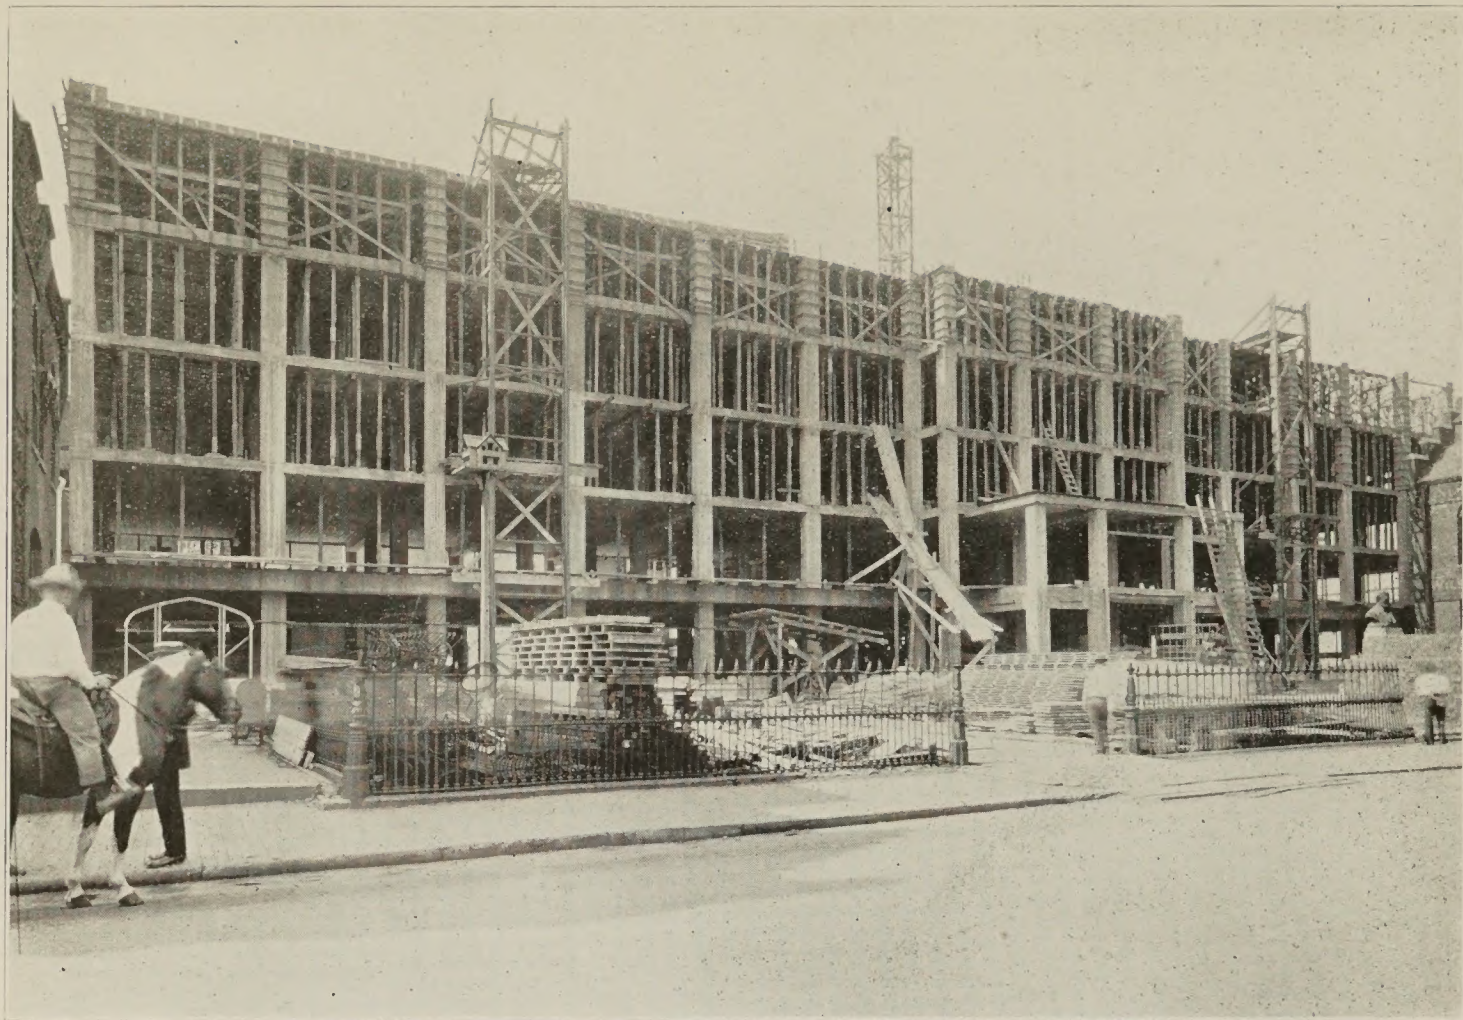

NOTHING more definitely proves the merit of a product than the adoption of it by an overwhelming majority of users. The almost exclusive use of the Symons Adjustable Column Clamp in the vast building activities of the United States and Canada is conclusive proof that it fills the needs of the contractor better by far than any other clamp on the market.

The efficiency and speed with which building is done nowadays has been attained by the development of modern methods. The old method of clamping forms had to be abandoned to keep pace with improvements, and the modern clamp, the Symons Clamp, has been found to be the most suitable for up-to-date requirements, thereby playing a very important part in the high standard of efficiency accomplished in present-day building.

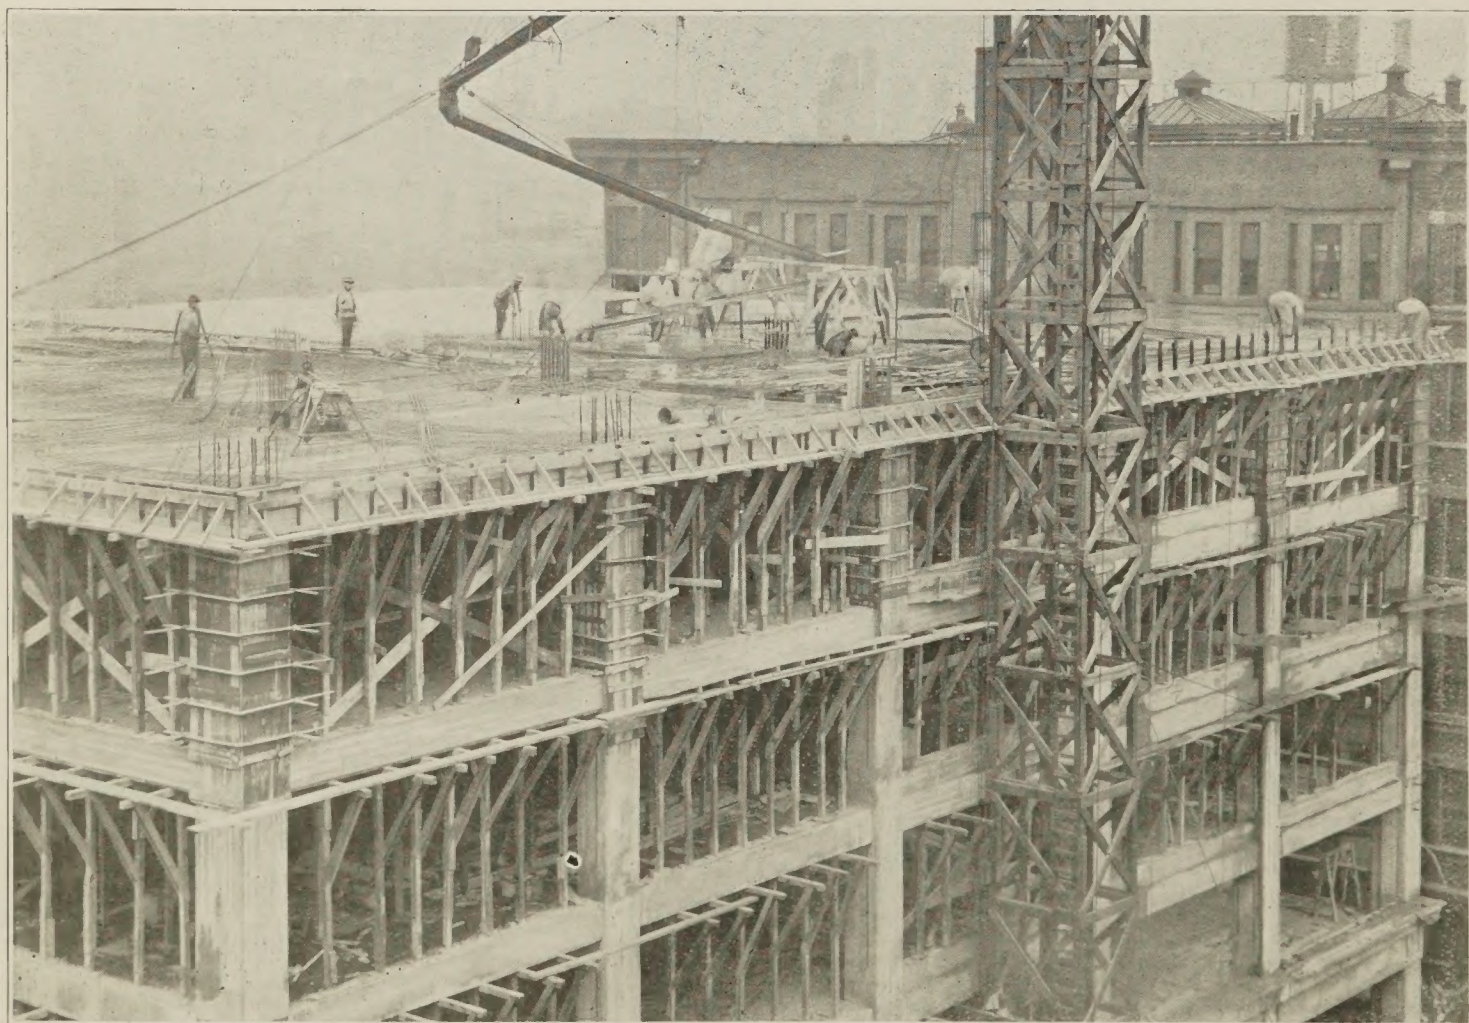

In this booklet are a number of photographs showing the use of Symons Clamps on big jobs. On the cover, for instance, notice that in almost every one of the many buildings in sight Symons Clamps were used during construction. This is just a typical example of the popularity of the Symons Clamp in every locality.

They are recognized as standard equipment by the leading contractors and engineers from the Atlantic to the Pacific. Prominent contractors rent Symons Clamps, and continue renting them again and again, because they know that they get safer, more accurate and more economical column construction.

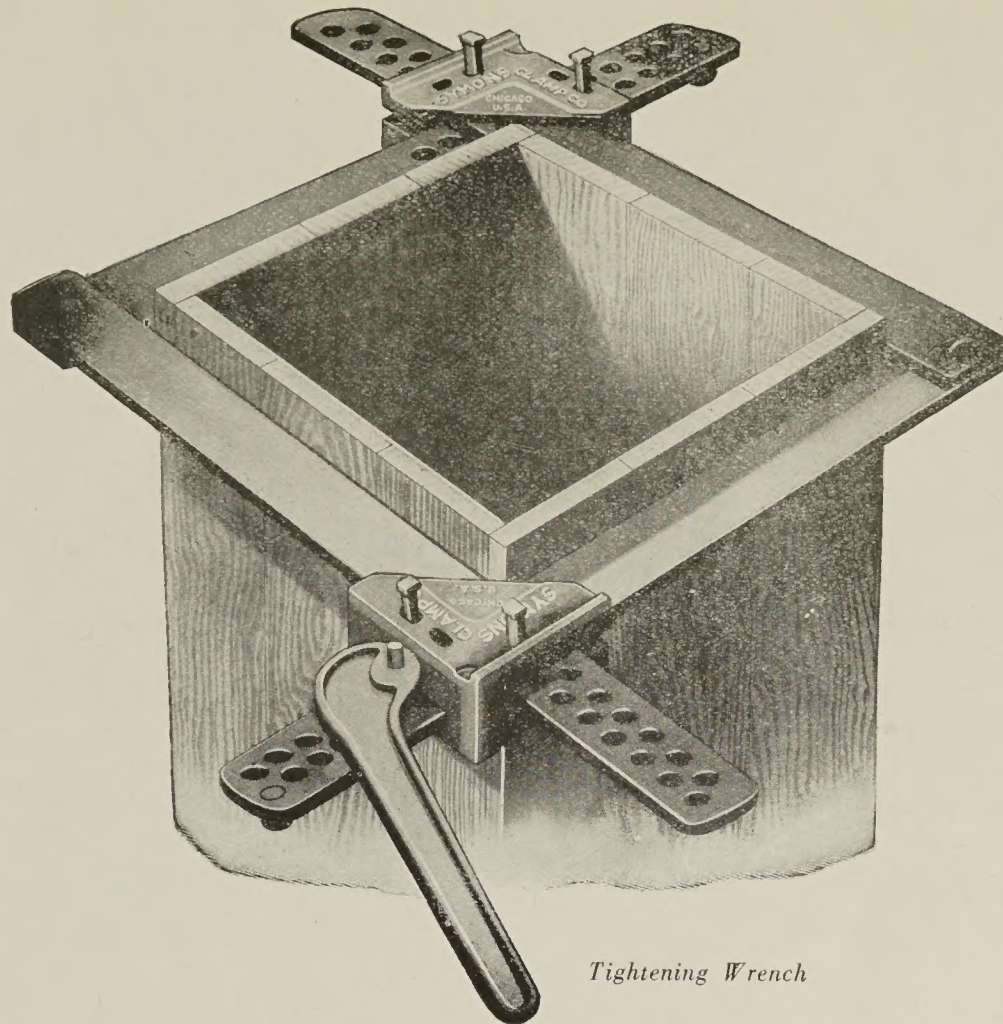

To show positive evidence that over 75 per cent of the concrete builders in the United States use Symons Clamps, we have printed, on pages ten to fourteen, inclusive, a list of users. The facts can bring out only the one natural conclusion, that the clamp that has won the approval of the building world, after years of test, is absolutely the best clamp, the Symons Adjustable Column Clamp.

The New Exchange Building, Union Stock Yards, Chicago, Illinois. Seven hundred Symons Clamps were used.

Overland and Willys-Knight Storage and Service Station, 26th Place and Dearborn Street, Chicago, Illinois. Large clamps necessary for basement and 1st floor columns are usually suitable for top floors as well. Size 48x48 has 22 inch adjustment.

Tightening Wrench

Features that Won Universal Favor for Symons Clamps

The simplicity of the Symons Clamp is one of the biggest reasons why more of them are used than all others combined. Note in the illustrations on this page, how simple the construction of it is.

It is complete in itself. There are no detachable parts, no nuts or bolts to become lost, and no battered threads to contend with. Old fashioned cut nails are used for pins, size 50d, which are furnished free with the clamps, but can be purchased at any hardware store if needed. This eliminates the danger of losing time sending to the factory for pins or wedges.

The Symons Clamp squares the form perfectly, and is adjustable to the smallest fraction. One size clamp is usually suitable for every column on the job.

The strength of this clamp is plainly evident. It consists of two pairs of pivoted arms and malleable brackets that cannot become separated from the arms. They do the work of two wooden clamps.

For description of the special Symons Clamp for long rectangular columns, see page, fifteen.

To more clearly demonstrate the efficiency of the Symons Clamp let us send you a sample. If you will write us, we will be glad to send you one free of charge, express prepaid, without any obligation on your part whatsoever. We know you will be convinced that Symons is the clamp for you.

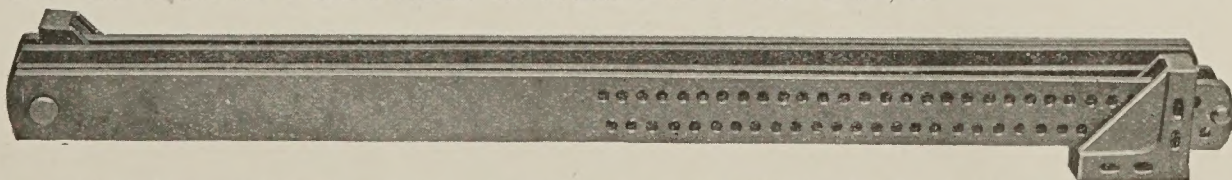

Sizes and Specifications of Symons Column Clamps

(IMPORTANT: "Size of Clamp" indicates length of clamp arm only. Does not mean size of column for which clamp is suitable.)

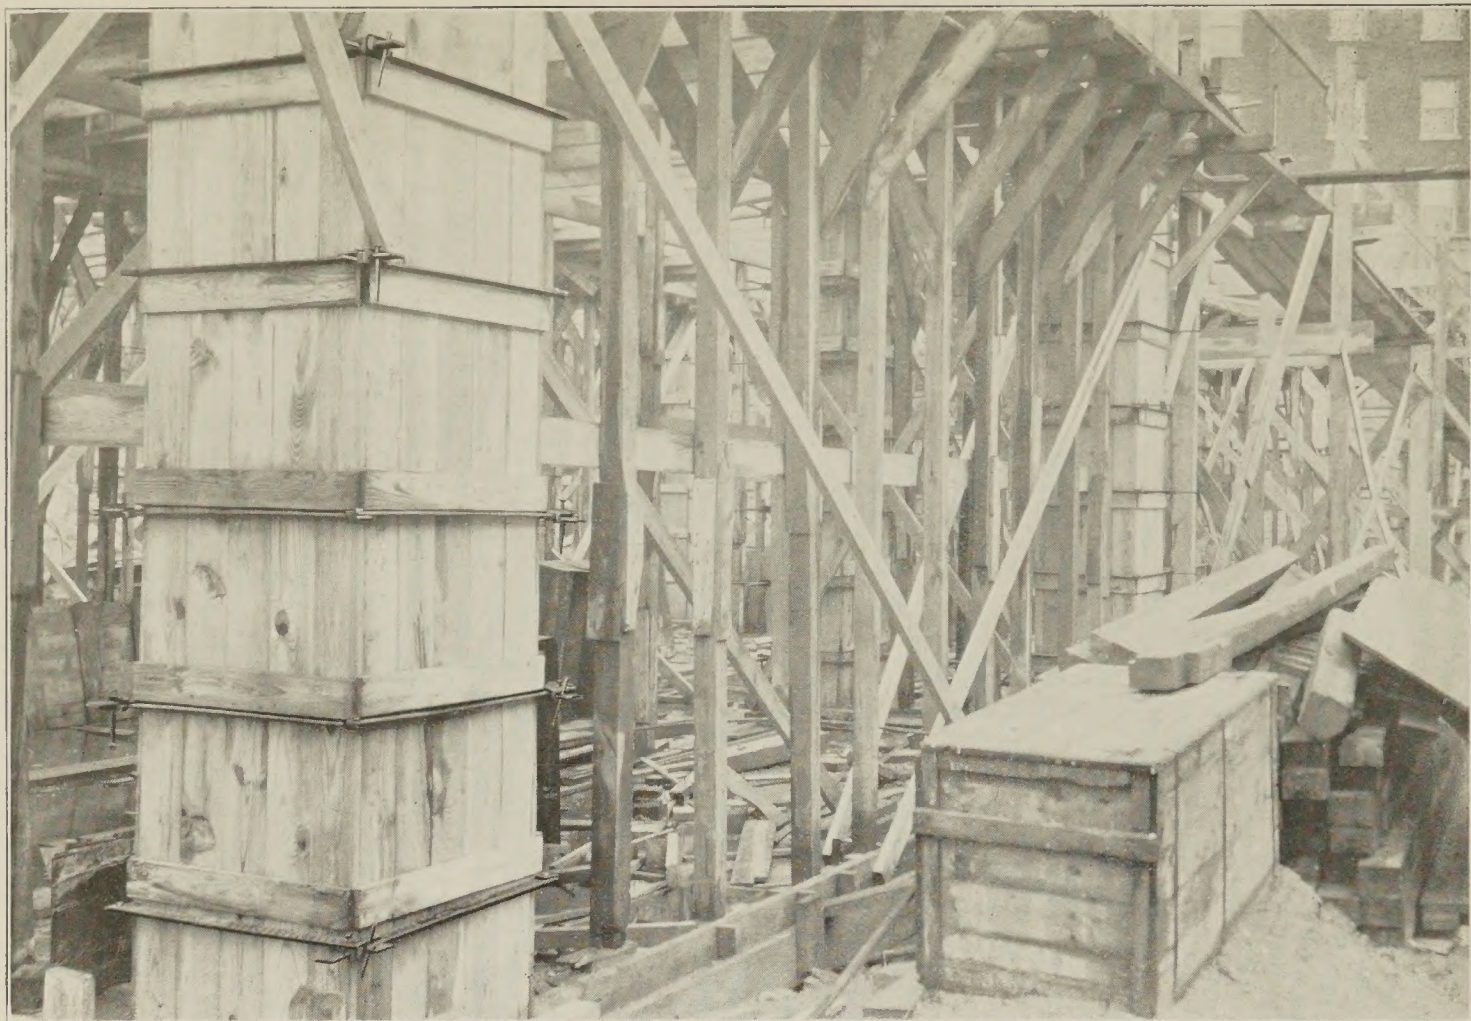

Size of Clamp Inches	Arms (High Carbon Steel) Inches	Adjustment Inches	Size of Columns (Square or Rectangular) for which Clamps are Suitable Inches
36 x 36	2 x $\frac{5}{8}$ x 36 long	16	25 x 25 down to 9 x 9 net of Conc.
48 x 48	2½ x $\frac{5}{8}$ x 48 long	22	36 x 36 down to 14 x 14 net of Conc.
60 x 60	3 x $\frac{5}{8}$ x 60 long	24	48 x 48 down to 24 x 24 net of Conc.
48 x 60	2½ x $\frac{5}{8}$ x 60 long	10	34 x 46 down to 12 x 22 net of Conc.
48 x 72	3 x $\frac{5}{8}$ x 72 long	22	34 x 58 down to 12 x 36 net of Conc.
72 x 72	3 x $\frac{5}{8}$ x 72 long	22	58 x 58 down to 36 x 36 net of Conc.

These figures are based on Clamps being placed to bear against form, not on cleats. If clamps are placed over cleats the net concrete size of column is reduced accordingly when placed over 2x4 cleats, size 36x36 is suitable for columns 21x21 down to 9x9.

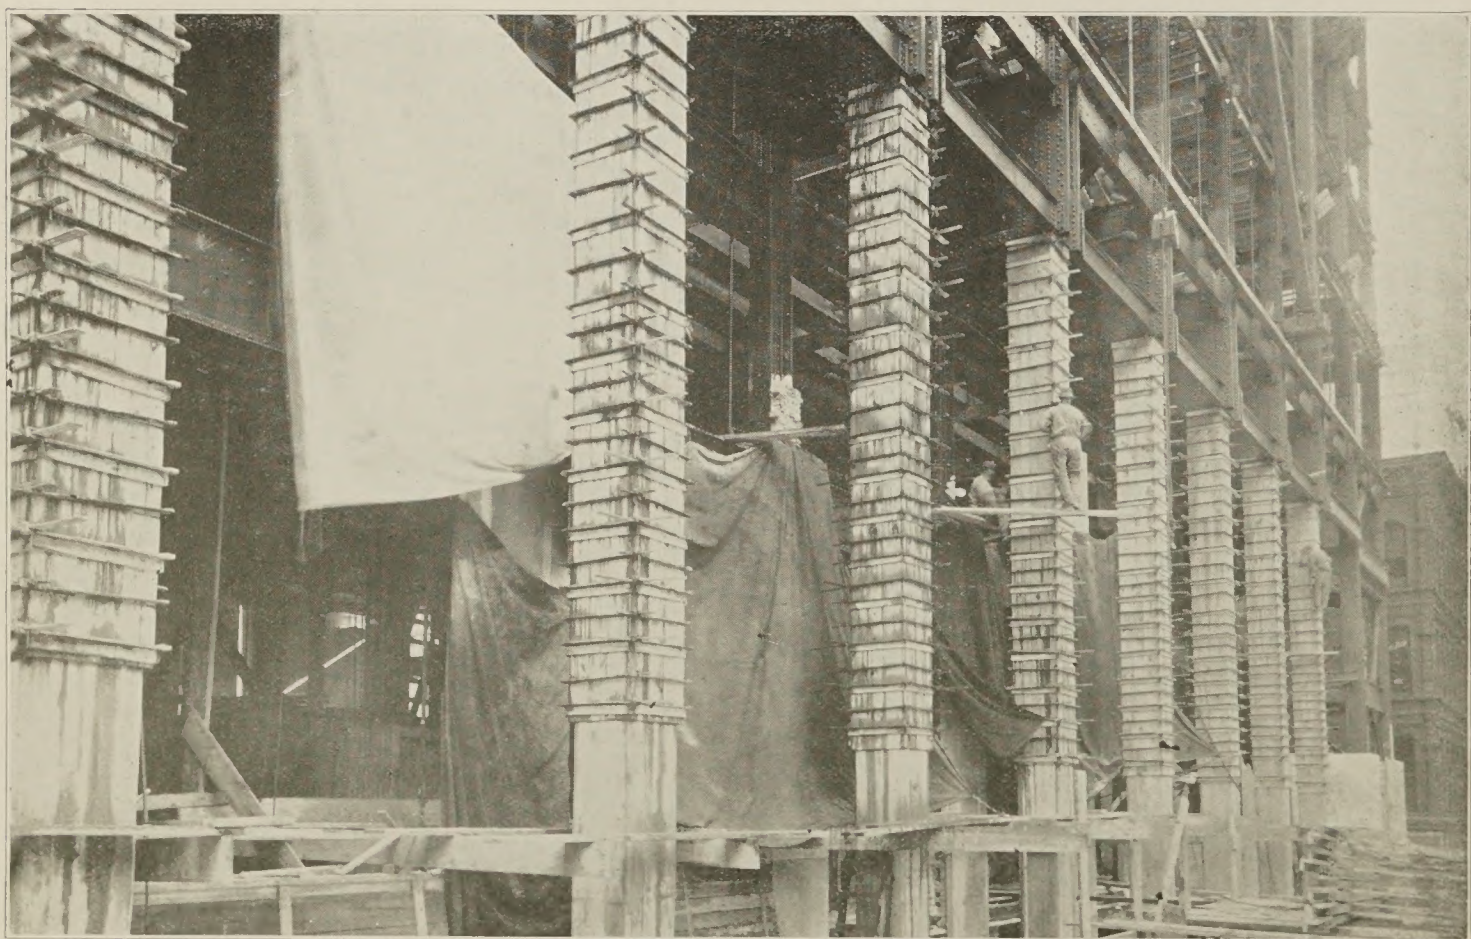

Above specifications are for column forms made of 2-inch boards.
With 1-inch boards size 36 inch is suitable for columns 26x26 to 10x10 inches, etc.

A complete clamp consists of two pairs of pivoted arms, with malleable brackets attached, as here shown. The brackets cannot be separated from the arms.

The Commonwealth Hotel, Diversey Boulevard and Pine Grove Avenue, Chicago, Illinois

Illinois Merchants Bank Building, Chicago, Illinois. Illustration shows Symons Clamps in place

Why Symons Clamps Are Guaranteed to Save You Money

When you place an order for Symons Clamps, you are protected by a definite guarantee that the clamps will make good on your job and that they will save you money as compared with any other method of clamping together your column forms—that they will be entirely satisfactory in every way. The following paragraph is included in our contract form and made a part of every order:

"It is understood that if the clamps herein ordered do not prove entirely satisfactory, you may return them to us within thirty days, F. O. B. the job, and without obligation."

What better assurance could you have that Symons Clamps will speed up your work and cut expenses?

Labor cost is a big item, and whenever you can lower it, just that much is added to your profits. A good bit of money is lost in time wasted putting on and removing faulty clamps from column forms. One of the strongest features of Symons Clamps is that they can be applied and removed much quicker than any other kind. They

can be removed in the time it takes to strike the two protruding nails at the corner of the clamp with a hammer, about five seconds. Think of the saving in labor this would make on one job alone!

When Symons Clamps are used not so many are required as when others are used. Being complete in themselves half of them can be removed from the columns within a few hours after pouring, and used to set up the next floor. There is another reduction of costs.

Send for a sample, which will be shipped to you free of charge and with no obligation. Make your own test and satisfy yourself that Symons Clamps will save you money. Or take advantage of the thirty-day trial order explained below.

Symons Clamps can be sold with an unqualified guarantee because their efficiency has been proved by saving thousands of dollars for contractors everywhere every year. They made good when form lumber cost \$25 and \$40 per thousand and carpenters were paid 50c and 60c an hour. Surely they ought to make good under present costs.

Rented With 90-Day Purchase Option

Almost every one of the numerous purchasers of Symons Column Clamps became acquainted with them through the rental plan.

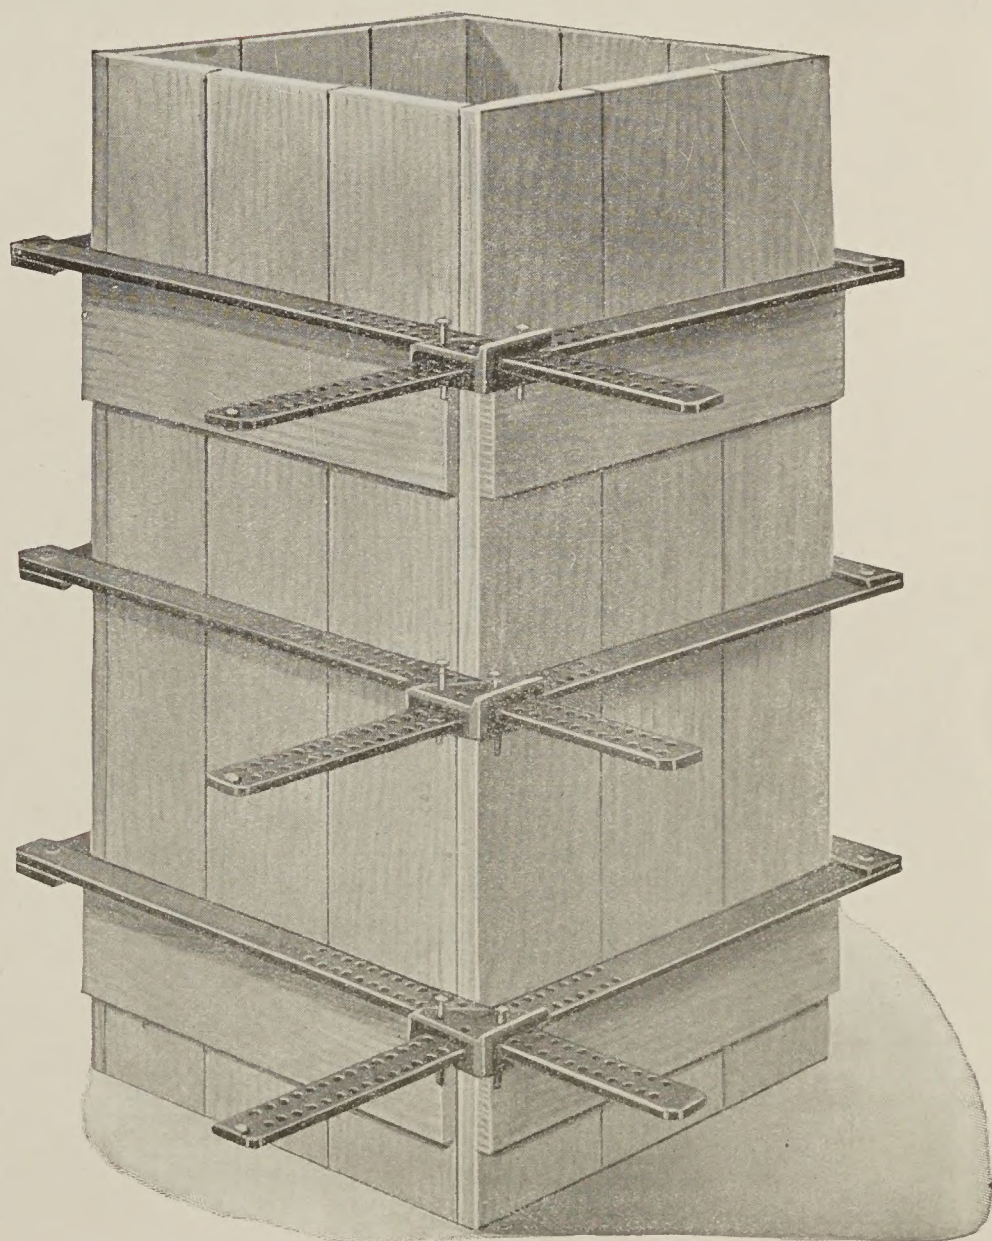

You may rent the clamps for any length of time with a ninety-day purchase option. Three months' paid rentals will apply on the purchase price. If they are not satisfactory you may return them within thirty days at our expense.

Take advantage of this rental proposition at once. It is a good opportunity to show yourself a new way to reduce your costs. Like the seventy-five per cent that now use Symons Clamps, you will be convinced and become a regular user.

Try Them For Thirty Days Free

We are so sure that you will be satisfied with Symons Column Clamps, and immediately see their big saving, that we will accept an order subject to 30 days' trial, under guarantee that the clamps will make good on a rental basis. After the end of the 30-day period, if they have not proved to be satisfactory, they can be returned to us at our expense.

There is no chance for you to lose. If the clamps make good, you gain. If they do not make good, you lose nothing.

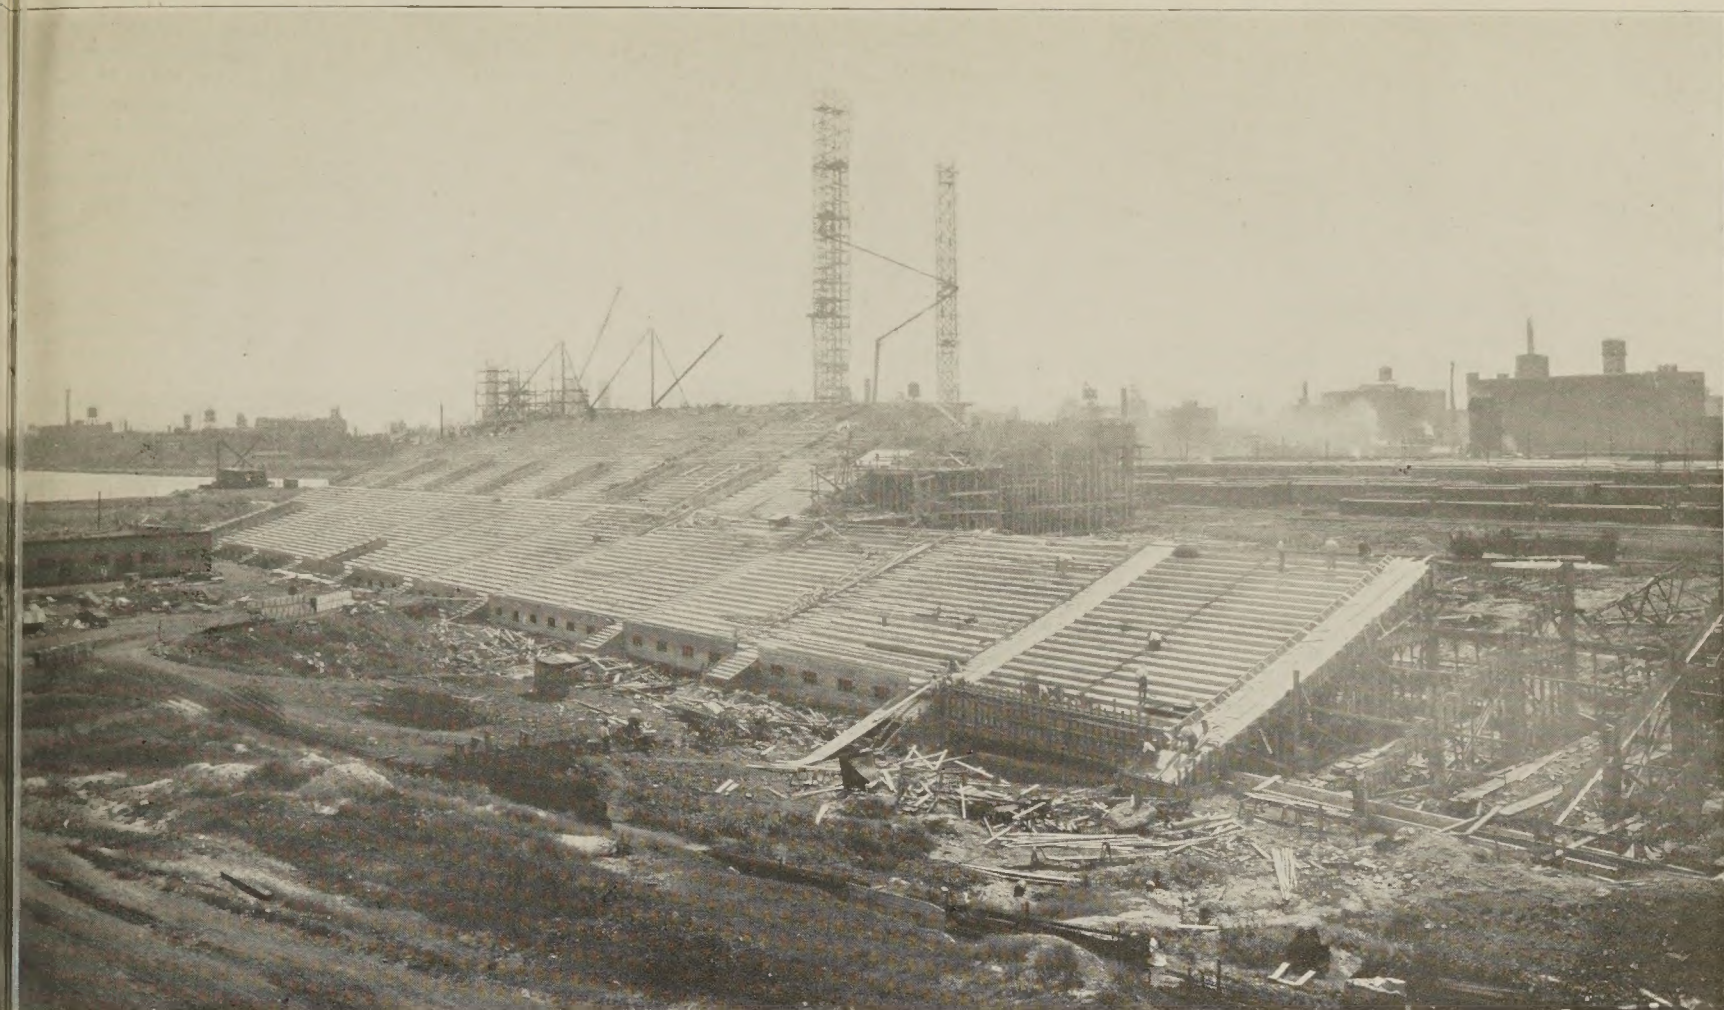

Another big job for Symons Adjustable Clamps. Here is a panoramic view of the new and w

Symons Clamps and Chicago's New Grant Park Stadium

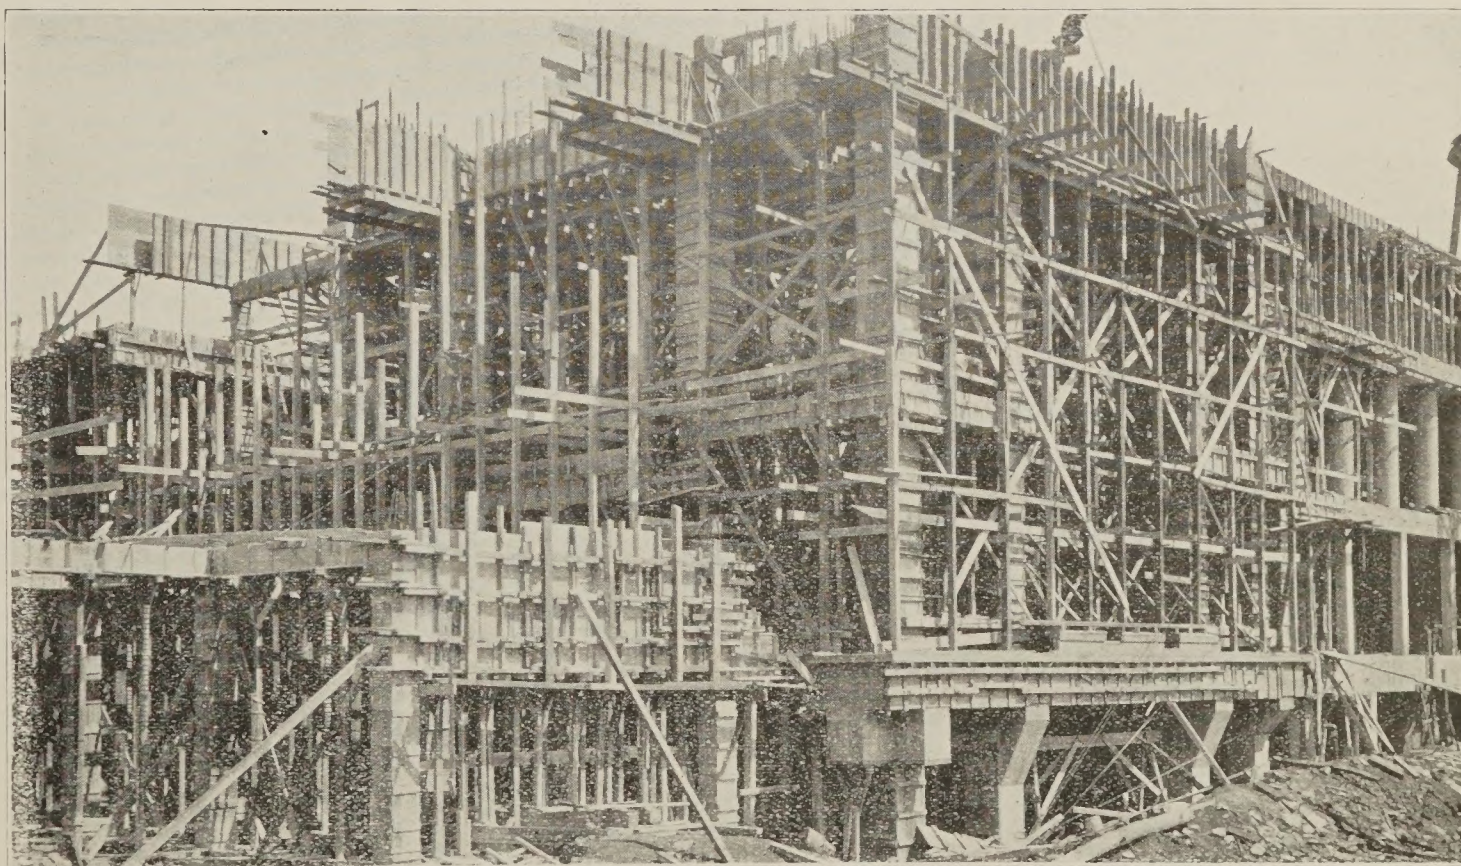

The panoramic view above shows Chicago's New Grant Park Stadium in process of erection. This is part of the huge Chicago Lake Front Improvement Program.

The seating capacity of this gigantic arena, when ultimately completed, will be 100,000. The section now being erected will seat 60,000. It is of reinforced concrete construction and will cost \$3,000,000. The total length of the stadium will be 1,014 feet, width of each side 180 feet, width of arena 300 feet, and total width 660 feet. The selection of Symons Clamps for this great work is sufficient proof to convince anyone in the building business that there is no other clamp as efficient as the Symons Adjustable Column Clamp.

We will be glad indeed to send you a sample clamp express prepaid, without charge of obligation. Write today.

ful Grant Park Stadium which is part of Chicago's enormous Lake Front Improvement Program

This photograph is a view of a section of the grandstand at the right in the illustration at the top of this page.

Here is Positive Proof that 75% of the Contractors Use Symons Clamps

Our list of users on this and the following pages verify the statement that over 75 per cent of the concrete builders in the U. S. use Symons clamps.

We could hardly give you more satisfactory evidence that they will make good on your job and save you money. While many of these later purchased, they all became acquainted with the clamps on our rental proposition.

This illustration shows the Pennsylvania Railroad Freight Station at Chicago, Illinois, with Symons Clamps in use

The Symons Special Clamp

for long rectangular columns.
Notice how the long arms are
reinforced to double strength.

We only recommend this clamp for long, narrow columns like the one illustrated here. The clamp consists of four separate arms, and for that reason is not so conveniently applied as our regular clamp described on page five.
